

Your home's foundation is its backbone, and we understand the importance of maintaining its stability and strength. Whether you're dealing with existing foundation issues or looking to prevent them, our expert team is here to provide tailored solutions that ensure the long-lasting integrity of your foundation.

Push Piers and Jack's strengthen your home in these ways:

Push Piers:

- Driven deep into the ground until they reach the dense soil layers of bedrock to stabilize and lift a foundation
- Hydraulic jacks are used to exert upward pressure
- Push piers remain in place to provide permanent support

Jacks:

- Positioned on top of the footings and adjusted to the appropriate height
- Adjusted to apply upward pressure, gradually lifting the structure
- Secured in place to provide permanent support

Stability Starts Here

Foundation Repair by Your
Neighborhood Experts

Common Causes of Foundation Settlement

Soil conditions

Soil compression, expansion, water content, and erosion put foundations at risk.

Plumbing leaks

Water leaks from faulty plumbing can cause issues including heaving.

Drainage

Poor drainage can lead to excessive moisture and affect the soil's properties.

Vegetation

As tree roots grow and expand, they can create voids or gaps in the soil.

Poor construction

Inadequate site preparation, the use of substandard materials, insufficient foundation design, and poor drainage can all lead to settlement issues. Lack of quality control and ignoring soil conditions during construction further exacerbates the problem.

Pinnacle Home Services

For over 13 years, Pinnacle Home Services has been at the forefront in foundation repairs. We are committed to quality service and customer satisfaction for homeowners and businesses, seeking cost-friendly and effective solutions for foundation issues.

We stay up-to-date with the latest advancements in foundation repair technology. Our team utilizes state-of-the-art techniques and cutting edge equipment to deliver superior results.

We use TITAN jacks and push piers - an adjustable post and hydraulically driven pile system built to withstand many conditions and provide permanent solutions.

Highest industry standards (ICCES Certified)

Superior Load-bearing Capacity

Tested, Proven, Trusted

We specialize in repairing slab and raised foundations, using lifting and leveling methods to ensure the stabilization of residential and commercial properties.

We proudly serve Greater Sacramento and the East Bay Area.
